

## Recessed Mat L Frame

Recessed Floor Mat L Frames is metal floor framing used to finish off stone, tile and other surrounding finished floor surfaces in preparation for placement adjacent to a recessed floor mat.

L frames help protect the surrounding floor surface while concurrently keeping the recessed floor mat firmly in place.

Aluminum mill is the standard finish for the recessed metal floor mat frames though other anodized and powder coat finishes are available.

Although most finishes floors are between 3/8" and 1/2" deep, other flooring types (and thus deeper frames) are available including 3/4" and 1-13/16" depths.

Item No: RMLF

**Tapered Angle Frames**

Size	Price per LF	Frame Ends	Finish
